

PROJECT 06 — AWS COST MONITORING & BUDGET ALERTS

AWS Solutions Architecture Hands-On Portfolio Project | Cost Governance, Alerting & Observability

Objective

Build a practical AWS cost-control solution that monitors estimated AWS charges, alerts at defined spending thresholds, routes notifications through Amazon SNS, and presents billing metrics in an Amazon CloudWatch dashboard.

AWS Services Used

AWS Budgets	Project06-AWS-Cost-Budget with 50%, 80%, and 100% thresholds.
Amazon SNS	Project06-Budget-Alerts with a confirmed email subscription.
Amazon CloudWatch	Billing alerts, EstimatedCharges metrics, and a custom monitoring dashboard.

Key Activities

- Configured budget thresholds at 50%, 80%, and 100% with no automated budget actions.
- Created an SNS topic and email subscription; confirmed the subscription successfully.
- Enabled CloudWatch billing alerts and accessed the AWS/Billing → Total Estimated Charge metric.
- Built Project06-AWS-Cost-Monitoring with EstimatedCharges and Cost by AWS Service widgets.
- Organized the dashboard for clear cost visibility and captured implementation screenshots for project evidence.

Architecture / Flow

AWS Budget 50 / 80 / 100% thresholds	Amazon SNS Project06-Budget-Alerts	Email Confirmed subscription	CloudWatch Billing metrics + dashboard
---	---------------------------------------	---------------------------------	---

Skills Demonstrated

AWS cost governance • Budget threshold design • SNS notification architecture • CloudWatch billing metrics • Dashboard configuration • AWS console troubleshooting • Operational documentation

Outcome

Delivered a working, low-overhead AWS cost-monitoring solution with documented budget controls, confirmed SNS email routing, CloudWatch billing visibility, and a portfolio-ready monitoring dashboard. The project demonstrates responsible AWS usage by avoiding unnecessary resource creation and testing alerts without intentionally generating spend.
